FlexCore Showcase sample document

This three-page file is here to exercise the PDF viewer. The Details pane lists the bookmarks of the document; page 2 carries a small form; the word FlexCore appears on every page so that a search has something to find.

Use the toolbar to move between pages, zoom from 25% to 400%, rotate, download or print. Select some text and press Highlight selection, or add a note from the toolbar; both are written into the file when you download it.

Order form

The three fields below are ordinary AcroForm fields. With form filling allowed, the viewer lists them in the Details pane; the values you enter there are written into the file on Download, Print and Save.

Customer: Avery Chen

Rush delivery: ☐

Region: North

Notes

Rendering happens in the browser: the pages are drawn on a canvas and a transparent text layer sits on top so that text can be selected, searched and highlighted. The file never leaves the browser unless the application asks the viewer for the edited bytes.

FlexCore documents such as this one can also be opened from a byte array supplied by the server, with the Open button hidden, when the viewer is used to show a generated report.

Search tips

Type a word in the search box and press Enter. Match case narrows the results. Previous match and Next match move between the hits; the Details pane lists every hit with its page. Searching for FlexCore finds a hit on each page of this file.
